7. Understanding and Implementing New Practices and Changes

by

1. Adamu Esubalew (PhD)
2. Mohammed Zeinu (M.Sc)

Addis Ababa Science and Technology University

Date: November 12, 2026

Objectives

The main objective will be identifying operational gaps, understanding and implementing new practices and changes to enhance creativity and innovation.

At the end of this unit, trainees will be able to:

- identify operational gaps in creativity and innovation operational processes,
- analyze new practices and changes in creativity and innovation operational processes, and
- implement new practices and changes in creativity and innovation operational processes.

Training outlines

- Understanding the need of new practices and changes
- Implementing new practices and changes
- New practices and changes implementation models
- Framework development process and implementation

7.1. Understanding and implementing new practices and changes

Understanding the new practices and changes is important to enhance creativity and innovation, and organizations should be willing to embrace new practices and changes.

Some of the **key processes** require to understand new practices and changes are the followings:

- **Evaluate existing methods** and identify areas for improvement,
- **Investigate** best practices,
- **Performance metrics** to understand the necessity for new practices and changes,
- **Analyze benefits and risks** of new practices and changes to understand the impact, and
- **Engage stakeholders** and involve those who can be affected by the new practices and changes.

7.2. Implementing new practices and changes

Implementing new practices and changes to enhance creativity and innovation is a multifaceted process that requires careful planning, effective communication, and creating ongoing support system.

Implementation of new practices and changes require the key processes.

Some of the **key processes** require to implement new practices and changes are followings:

- Develop a clear plan (set clear objectives, create a timeline, and allocate resources),
- Effective communication (share the vision, provide regular updates, provide training and create support systems),

Cont’d

- Encourage participation and feedback (involve stakeholders in implementation and create channels for ongoing feedback,
- Monitor progress (track key **performance indicators**, be flexible to make adjustments),
- **Celebrate successes** (acknowledge achievements), and
- **Evaluate and reflect** (conduct a post-implementation review, and learn from experience).

Activity 7.1: Group discussion

Dear trainees, please discuss in groups on the following discussion points, and present your reflections.

1. Identify the key processes to implement new practices and changes.
2. Describe how to implement new practices and changes to enhance creativity and innovation in government organizations.
3. Explain the strategies how to address resistance to implement new practices and changes.
4. Demonstrate performance measurement metrics that can be used to evaluate implementation of new practices and changes.
5. Identify the techniques how to collect feedback for further improvement of implementing new practices and changes.

7.3. New practices and changes implementation models

7.3.1. Comprehensive approach model for innovation enhancement

- The model has various components interlinked with each other's.
- The whole model is encapsulated in social environment within which the organization
- The beginning of this model presents the place of organization structure at the top having overall control and monitoring in whole innovation process.
- Comprehensive approach model for innovation enhancement is depicted in **Figure 7.1.**

Cont'd

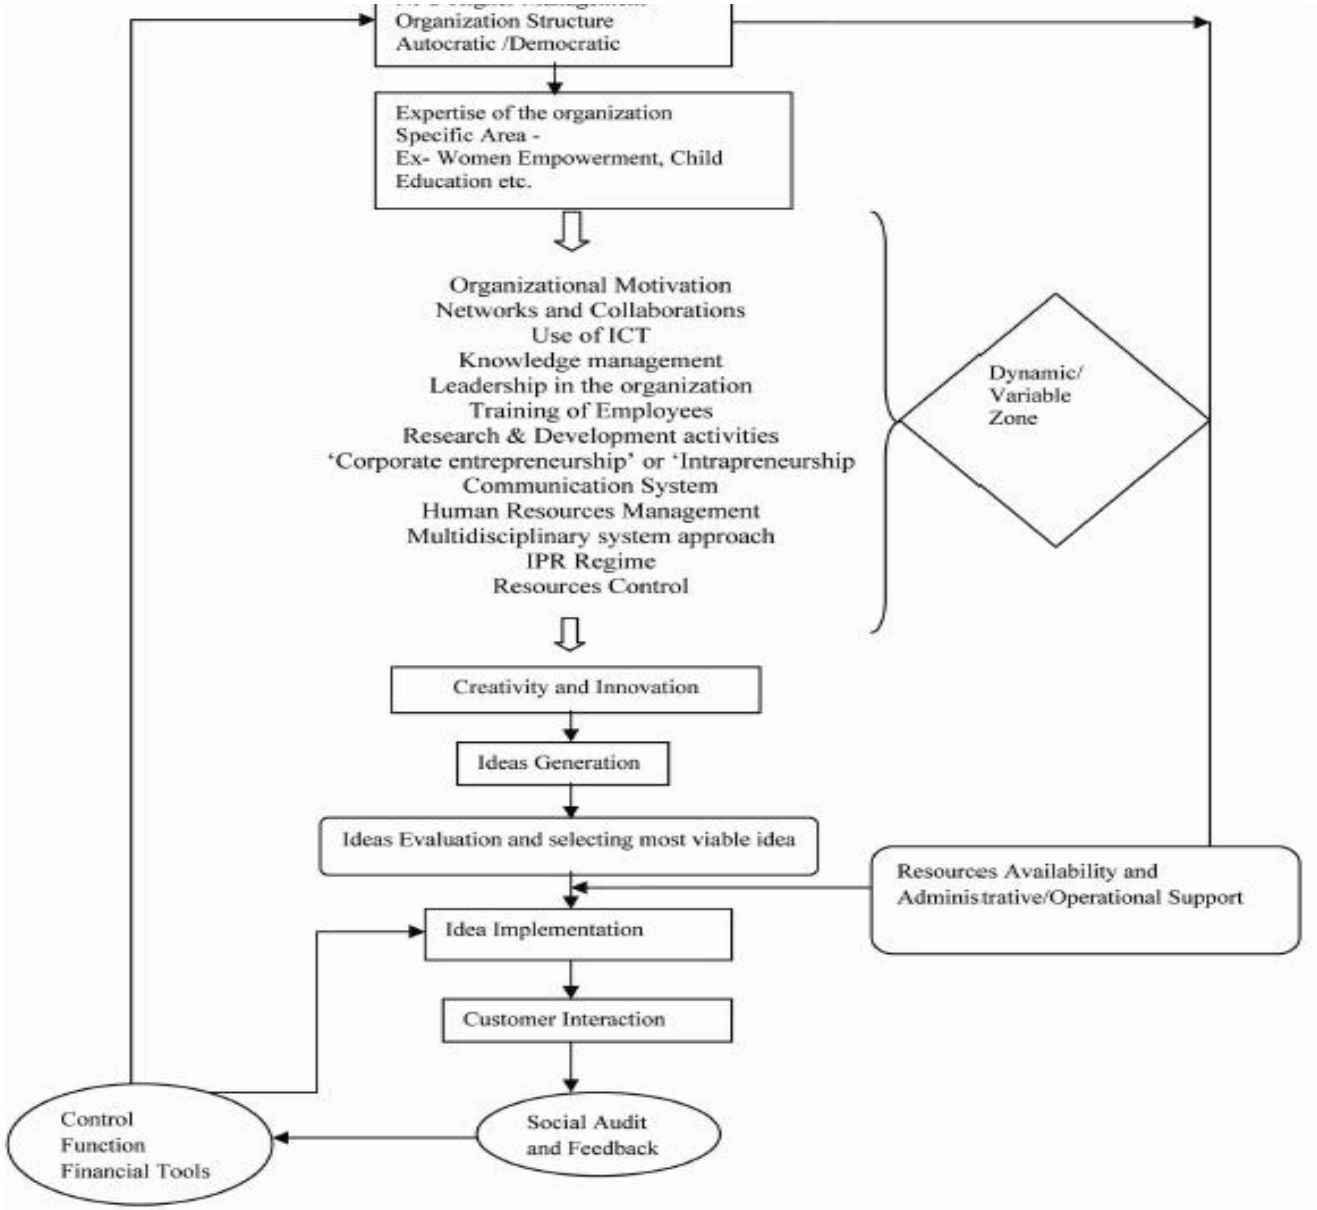

Figure 7. 1 Comprehensive approach model for innovation enhancement

7.3.2. Componential model of creativity and innovation in organizations

- The componential model posits that ideas are generated by individuals.
- The idea generation process is fostered by individual factors.
- After an idea is generated, it ascends to the organizational level where its implementation occurs.
- Influencing factors at the organizational level are analogous to those at the individual level.
- The componential model of creativity and innovation in organizations is shown in **Figure 7.2.**

Cont'd

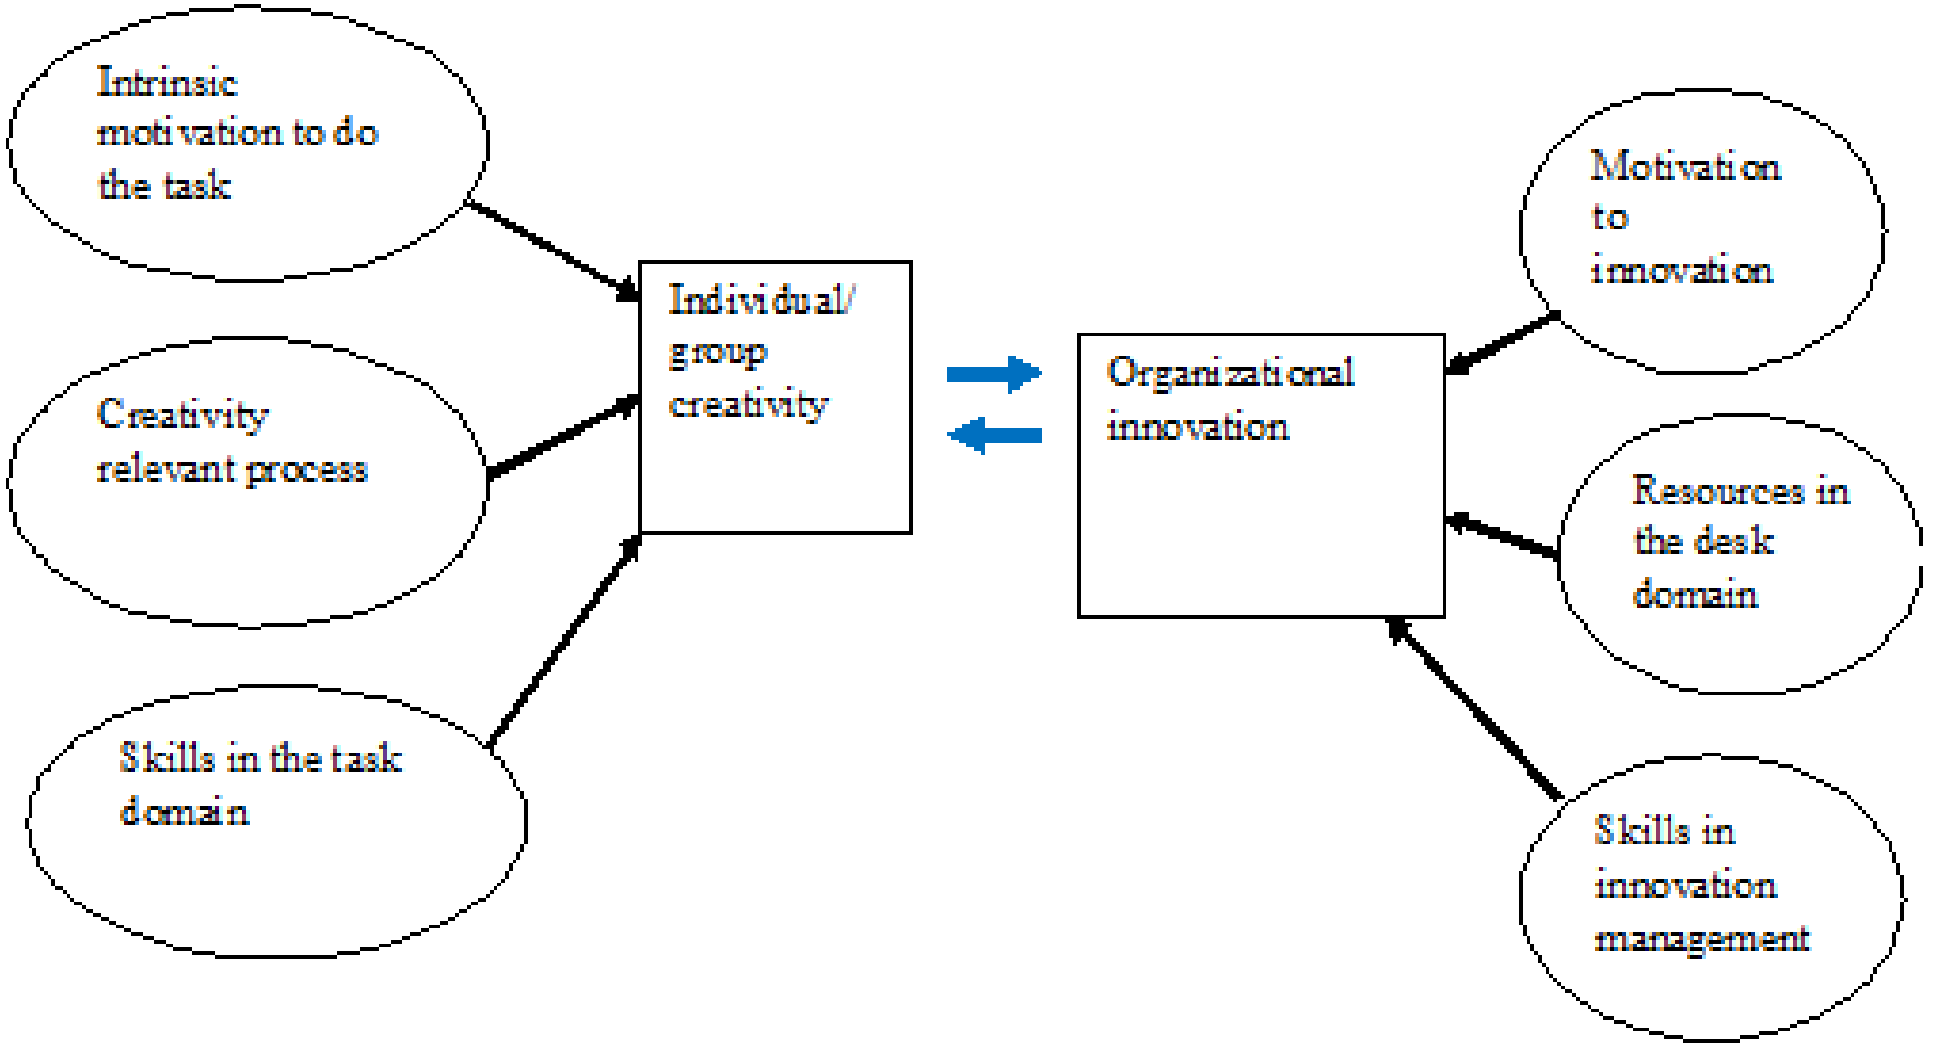

Figure 7. 2 Componential model of creativity and innovation in organizations

Activity 7.2: Group discussion

Dear trainees, please discuss in groups on the following discussion points, and present your reflections.

1. Identify the models to implement new practices and changes.
2. Describe how comprehensive approach model, componential model and model of value creation framework cycles can be used for implementing new practices and changes to enhance creativity and innovation.
3. Explain the how to select an appropriate model for implementation of new practices and changes.

7.4. Framework development process and implementation…

The competency-based **framework development process** and implementation require stakeholder engagement, benchmarking, framework development, competency assessment, training and development programs, integration with human resources system and process, establishing effective performance metrics for competency framework evaluation as shown in **Figure 7.3.**

Cont'd

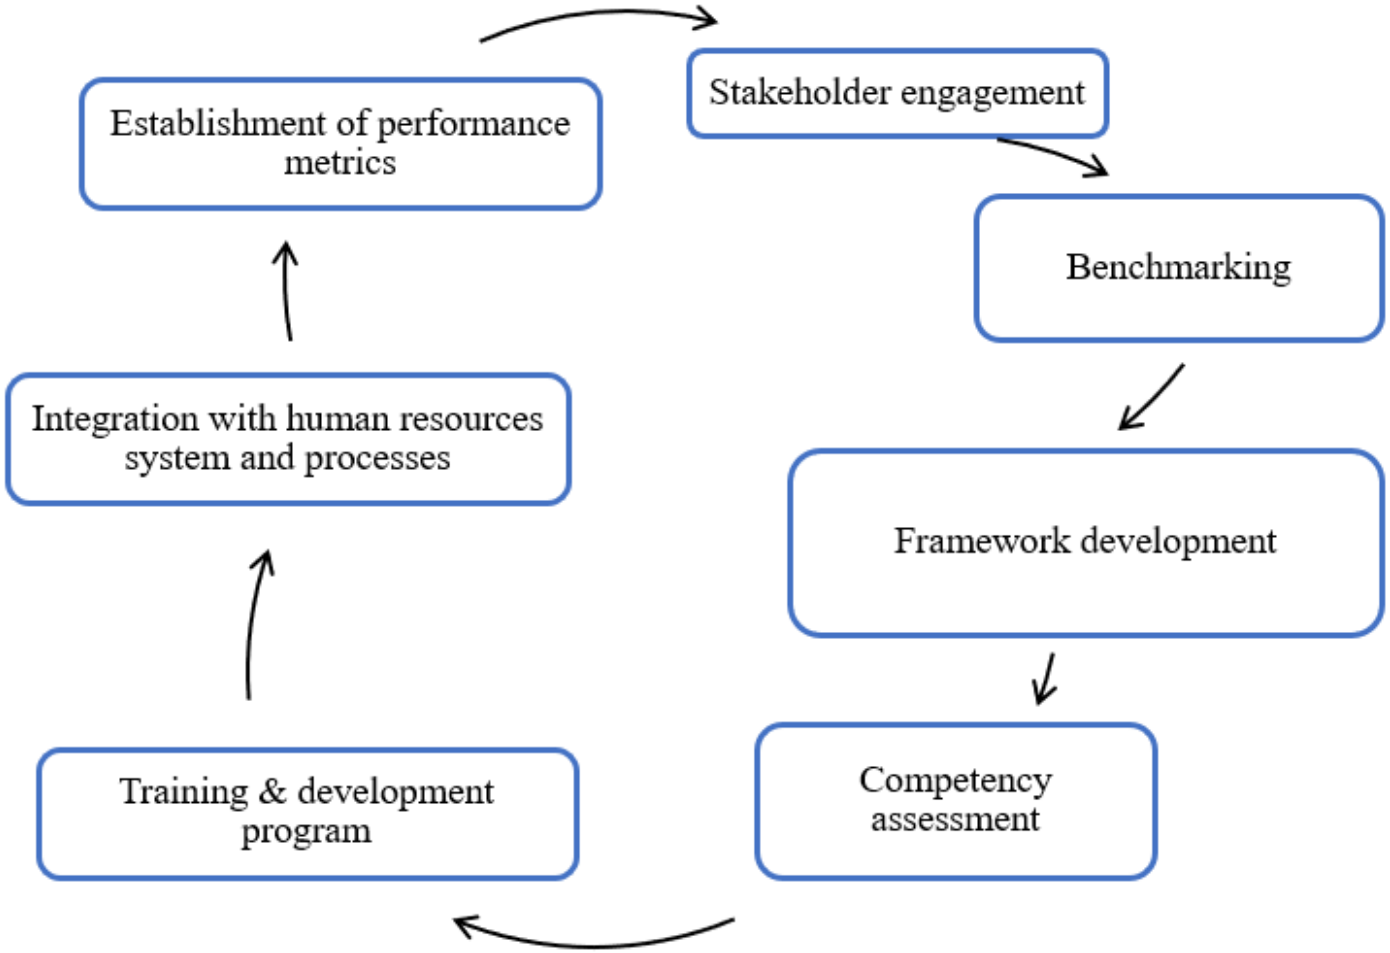

Figure 7.3 Competency-based framework development process and implementation

Cont’d

- **Stakeholder engagement:** Key stakeholders involved in competency management should be identified, clarifying their roles, responsibilities, and expectations
- **Benchmarking:** Conducting a best practices analysis and benchmarking with similar organizations. However, adapting best practices may pose challenges in terms of feasibility and applicability.

✓ **Framework development:** The decision on whether organizations should utilize generic competency models or develop their own is a critical one.

✓ **Competency assessment:** developing assessment tools. However, ensuring alignment between assessment outcomes and targeted interventions for employee development can be challenging.

Cont’d

- **Training and development programs:** Communicating all employees how the organization intends to utilize the competency framework as a multifaceted tool for training and career development.
- **Integration with human resource systems and processes:** involves integration with human resource systems and processes including recruitment, performance management, succession planning, and talent development.
- **Establishing performance metrics for evaluation:** establish metrics and key performance indicators (KPIs) to evaluate the effectiveness of a competency framework in driving organizational outcomes.

Cont'd

To implement new practices and changes, there are resistances against the implementation.

Resistance is a natural response to new practices and changes.

The resistances are considered as natural phenomena of human beings, and provide enough information for resistant individuals about the new practices and changes.

Ignoring resistances and implementing the new practices and changes will have negative consequences.

Understanding concerns, providing clear rationale, involving **resistors in solutions**, and being patient and supportive throughout the transition are the strategies to address resistances.

Thank You!
